

Public Satisfaction Survey 2024 results

Priorities Committee
June 17, 2025

Project summary

Annual general population survey

Gauge public satisfaction with:

- Quality of life in Strathcona County
- Satisfaction with County services

Methodology

Two data collection methods

Telephone recruitment via market research vendor

- Random sampling fielding strategy
- Statistically valid and significant results
- Representative sample based on age, gender and location in the County
- Target: 600 responses. Actual: 609 responses

Open, online survey

- Self-selection, communicated through County communication channels
- Target: 500 responses. Actual: 737 responses

Methodology

Why two data collection methods?

Telephone sample provides reliable statistically valid data.
This presentation will focus upon this sample.

Online sample gives us inclusivity and profile in the community.
Potential to collect as much information as possible.

Presentation will highlight interesting differences in the online data set.

Point in time effects

Winter
weather

US-Canada
trade war

County
activity

January 20 – February 14

Respondent profile

■ Male ■ Female ■ Other/Prefer not to answer

■ 15-34 ■ 35-64 ■ 65+

Respondent profile

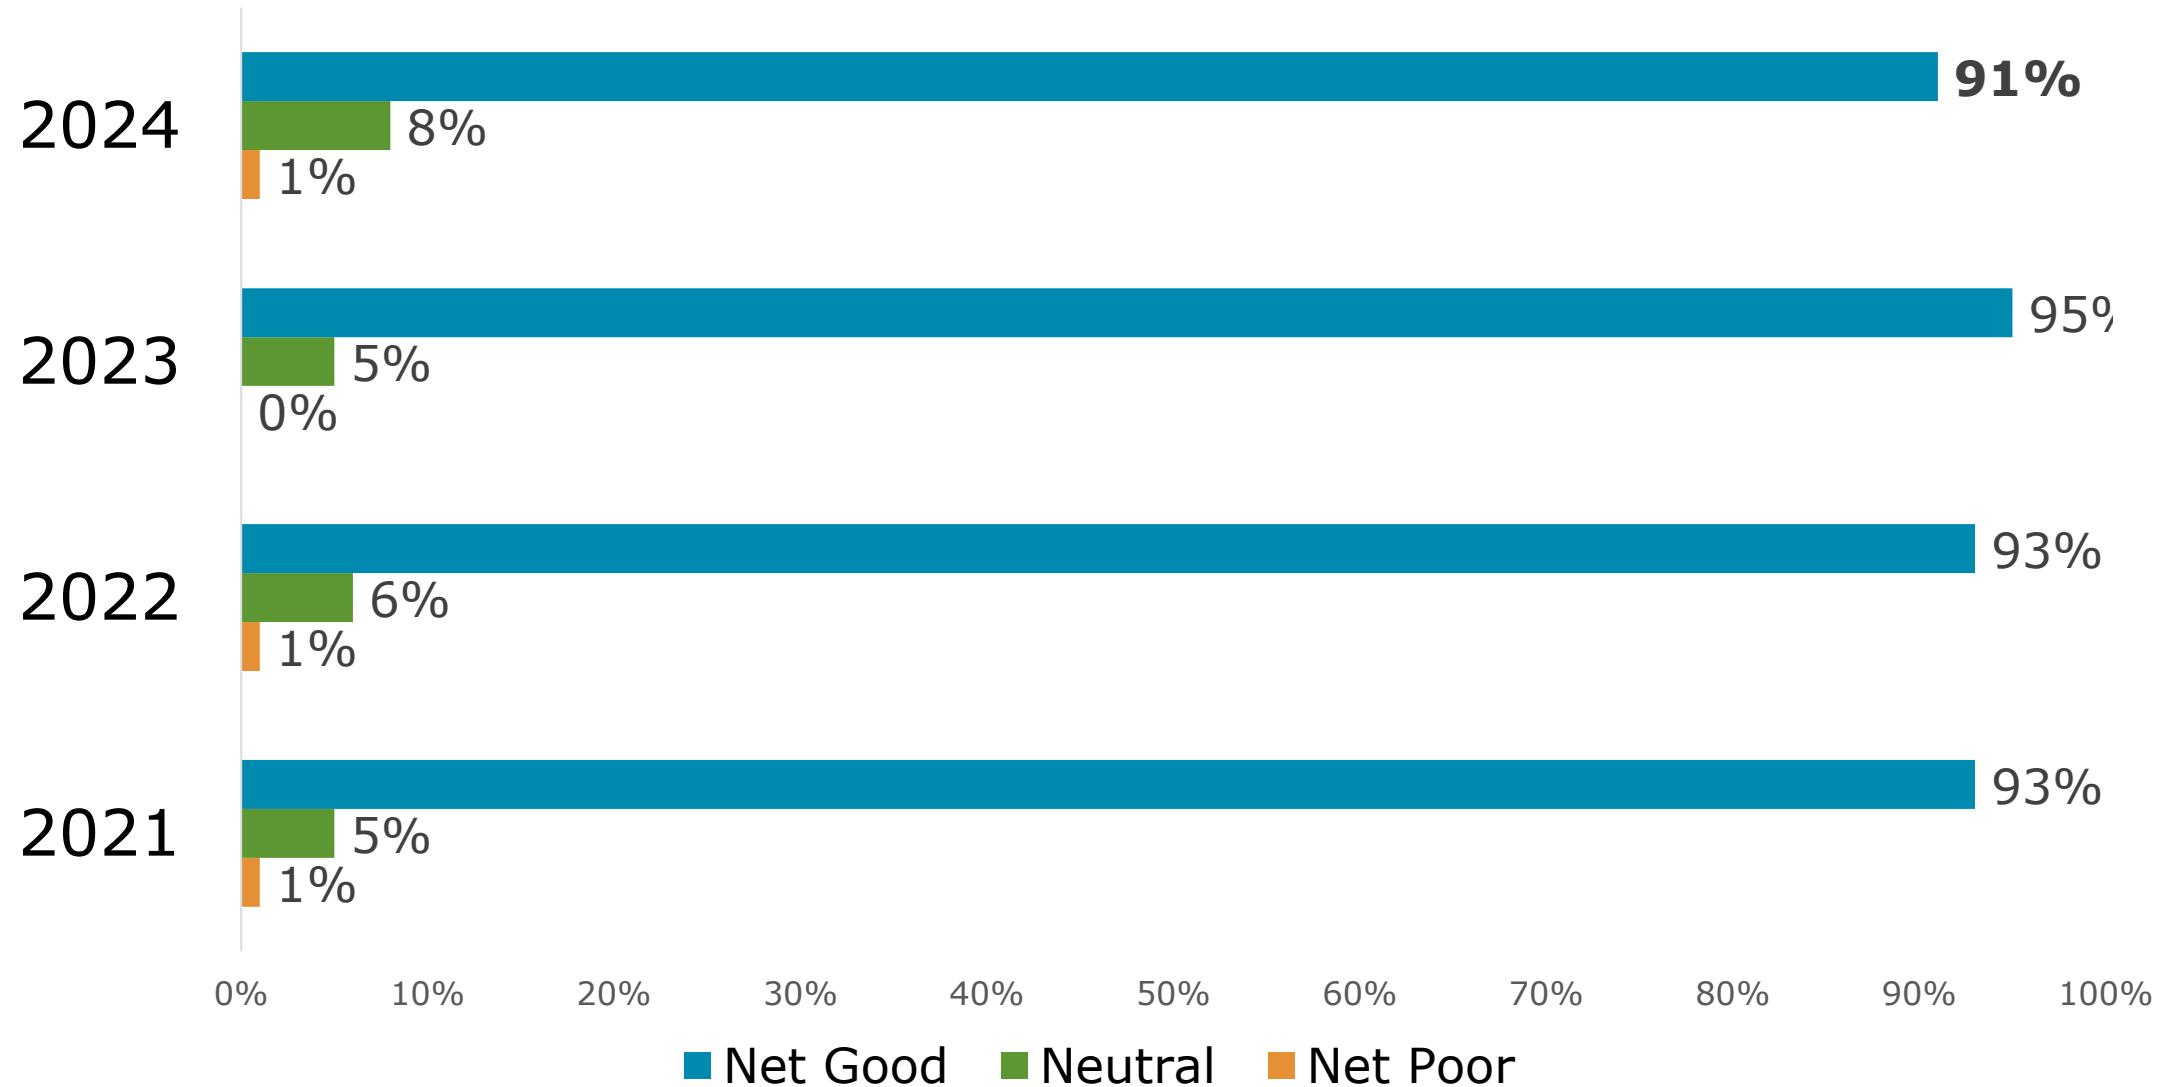

■ Sherwood Park ■ Rural ■ Rural hamlet

Quality of life

Welcoming community

Welcoming community

Thinking about your neighbours, how many of them do you know by name?

■ None of them ■ Some of them ■ Most of them ■ All of them

To what extent would you feel comfortable asking for help from one of your neighbours?

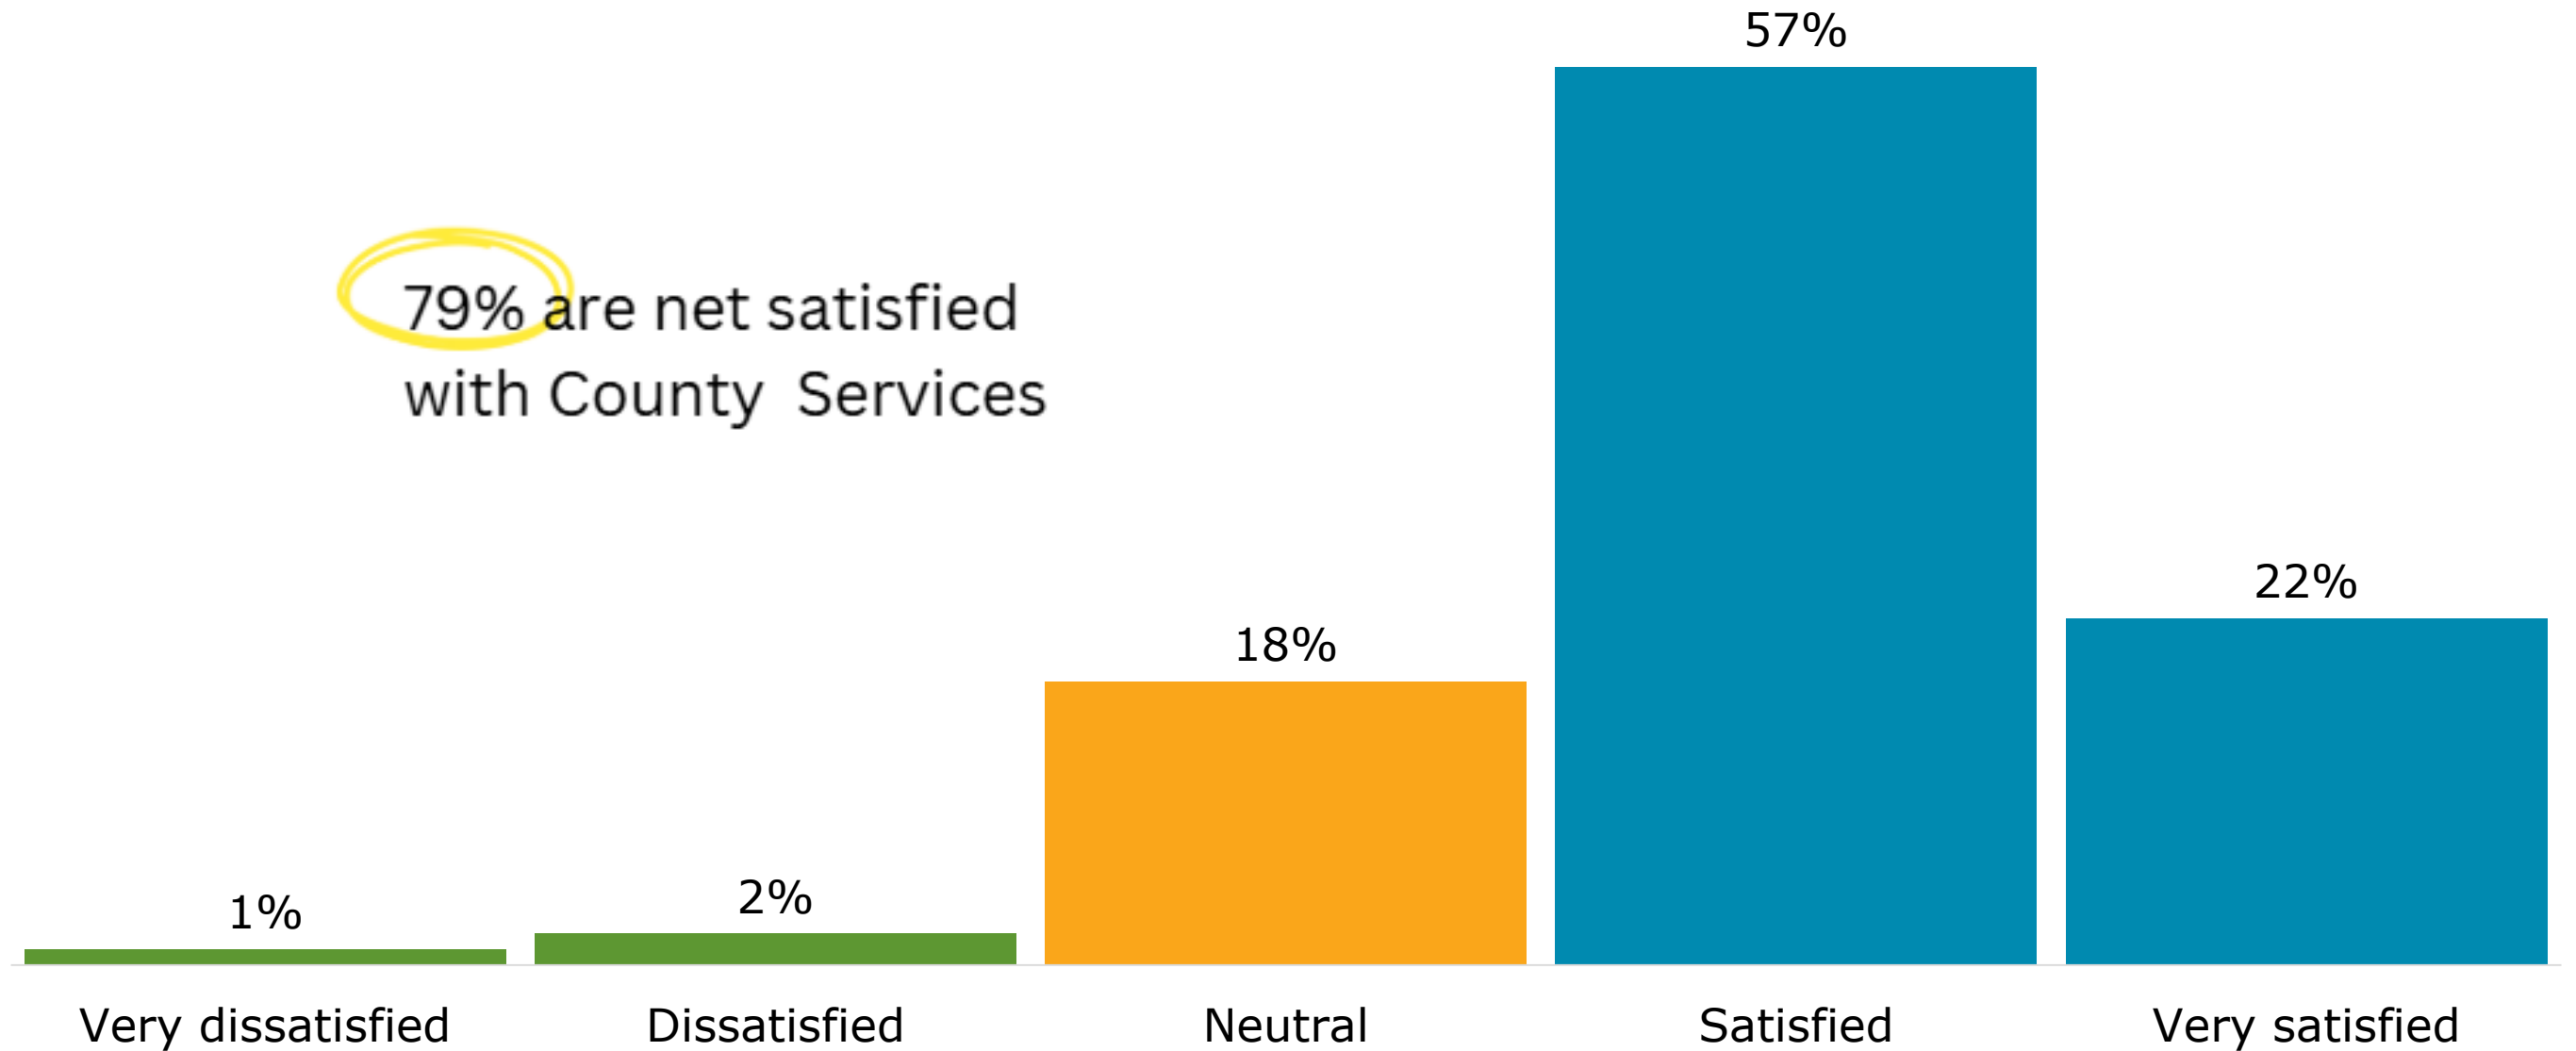

■ Not at all comfortable ■ Somewhat comfortable ■ Completely comfortable

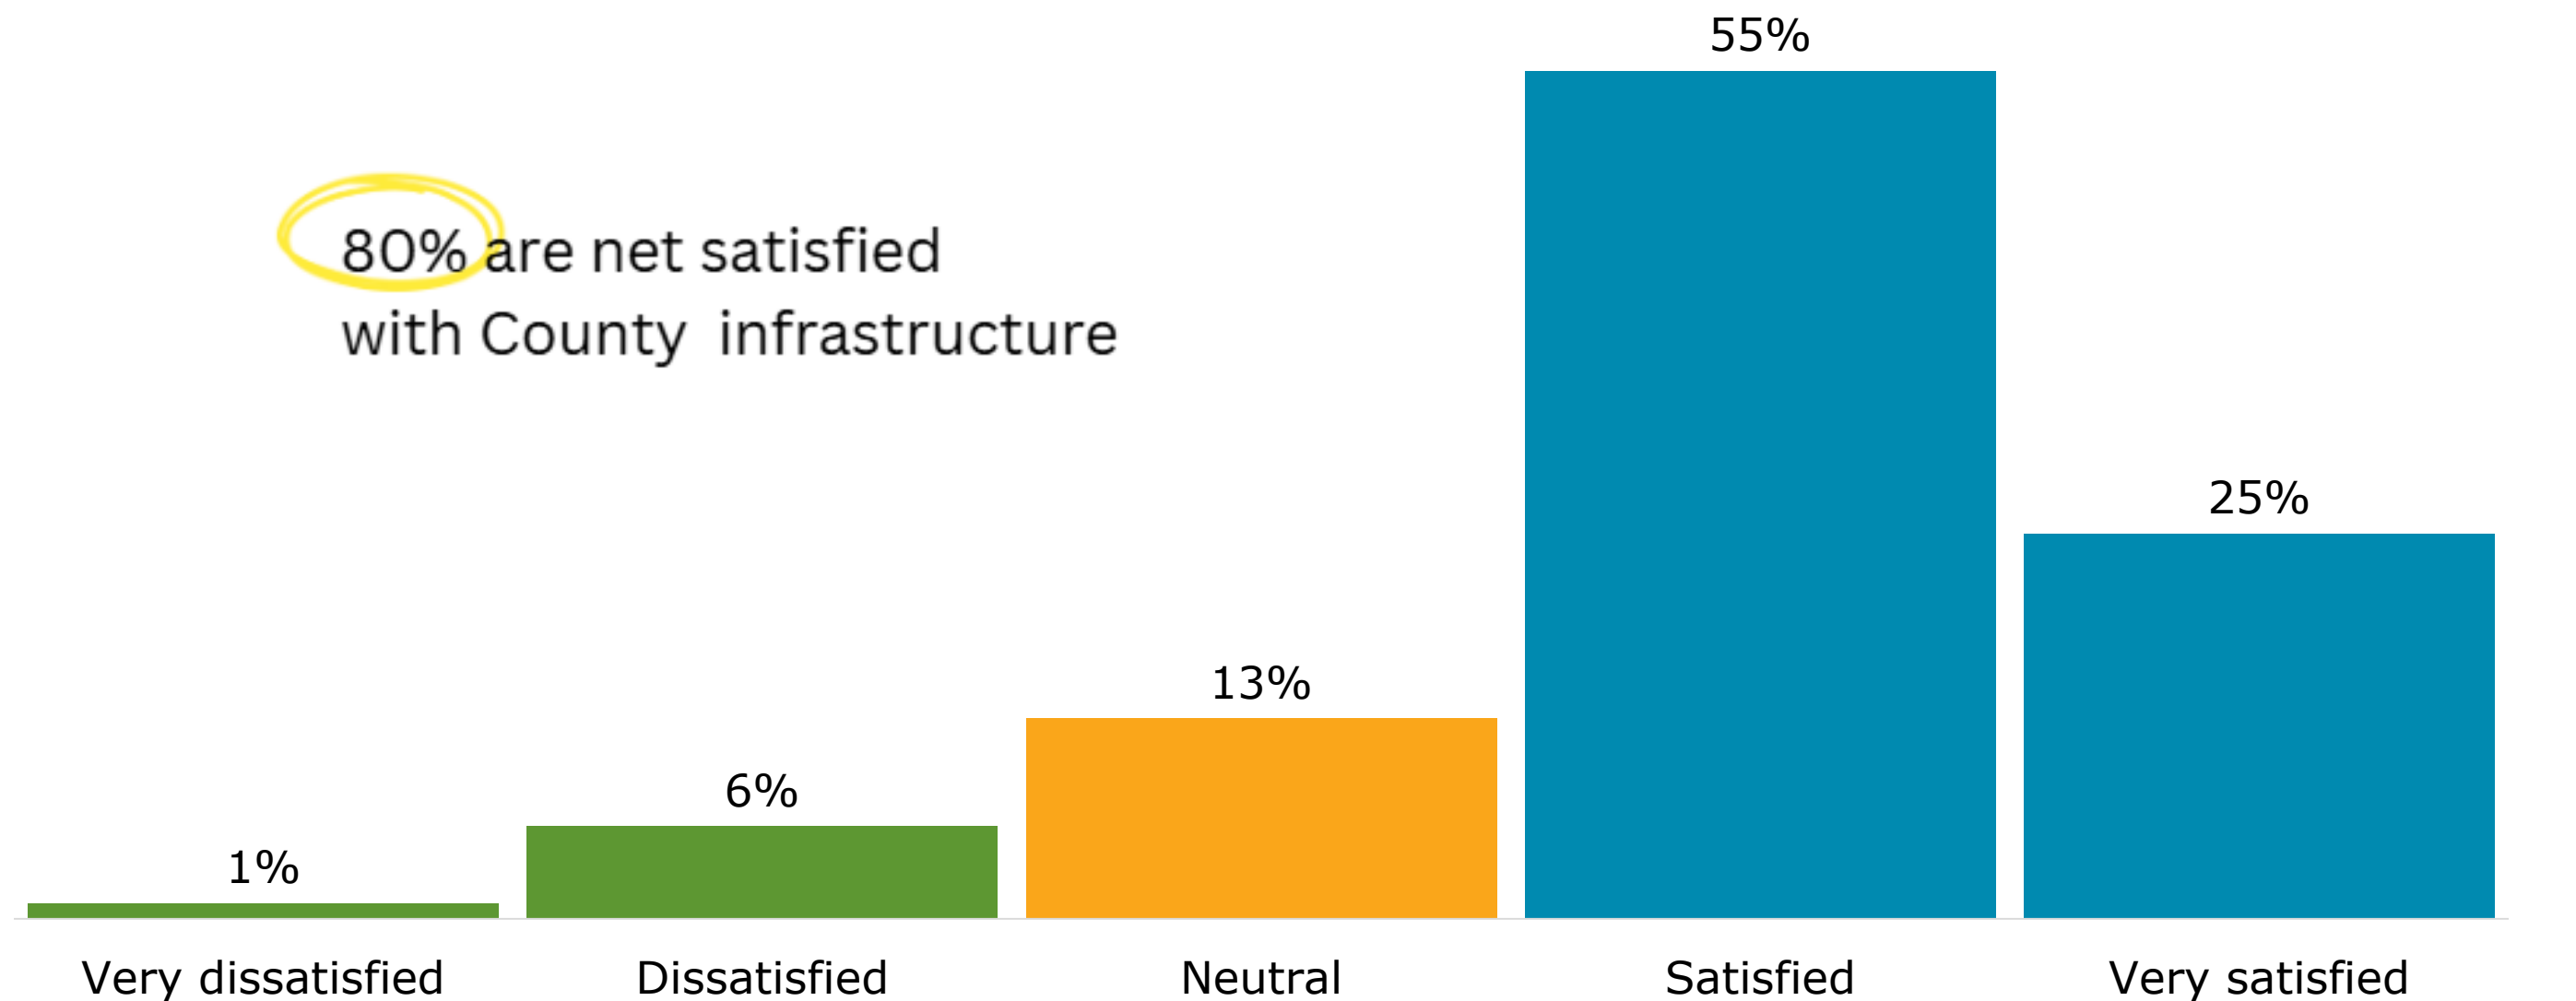

Service satisfaction

Overall service satisfaction

Overall infrastructure satisfaction

Overall service and infrastructure satisfaction 2022-2024

Overall service

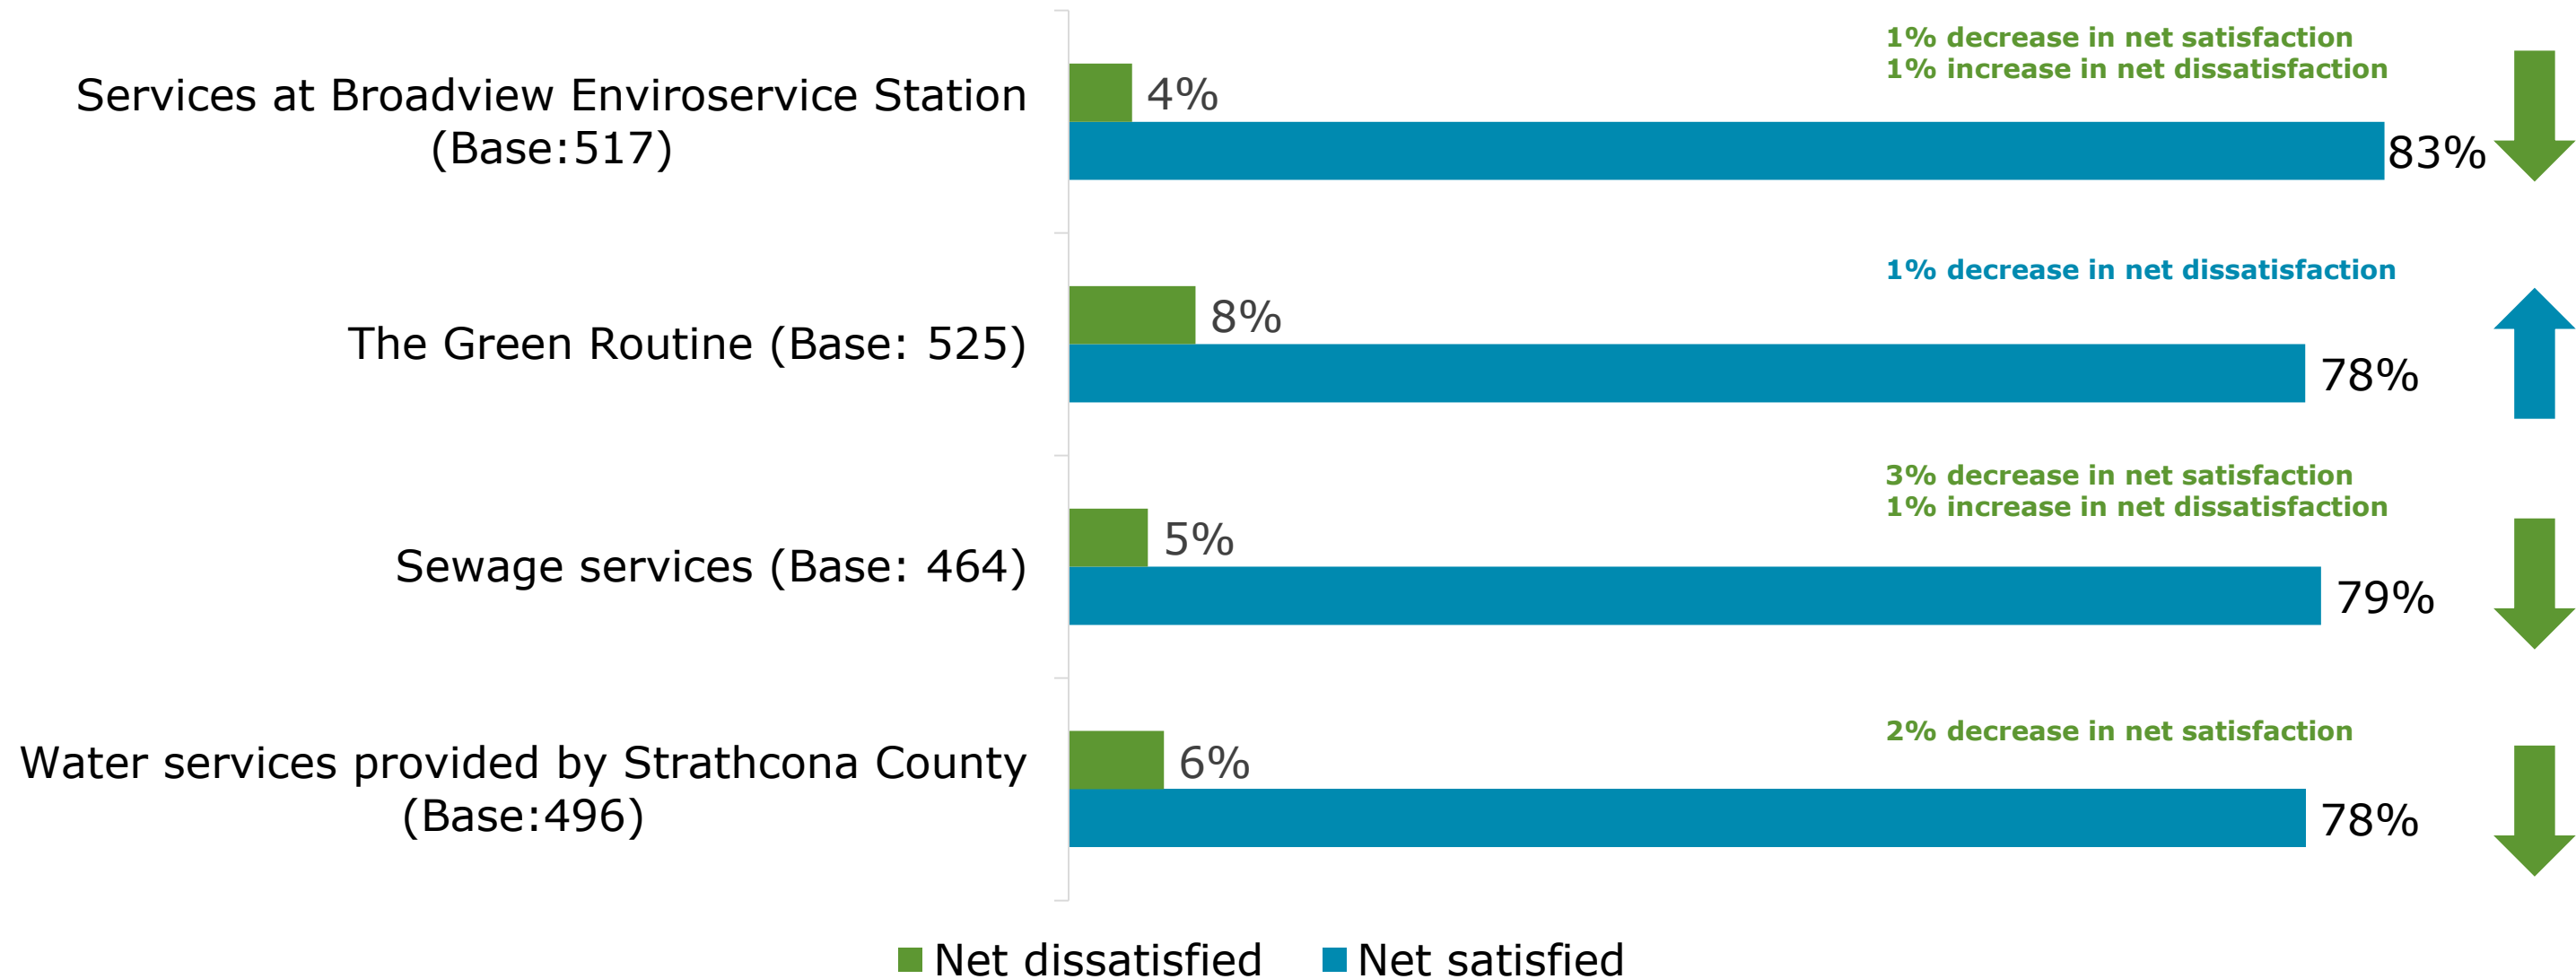

Over the past three years, satisfaction with overall County services has averaged 80%

Infrastructure

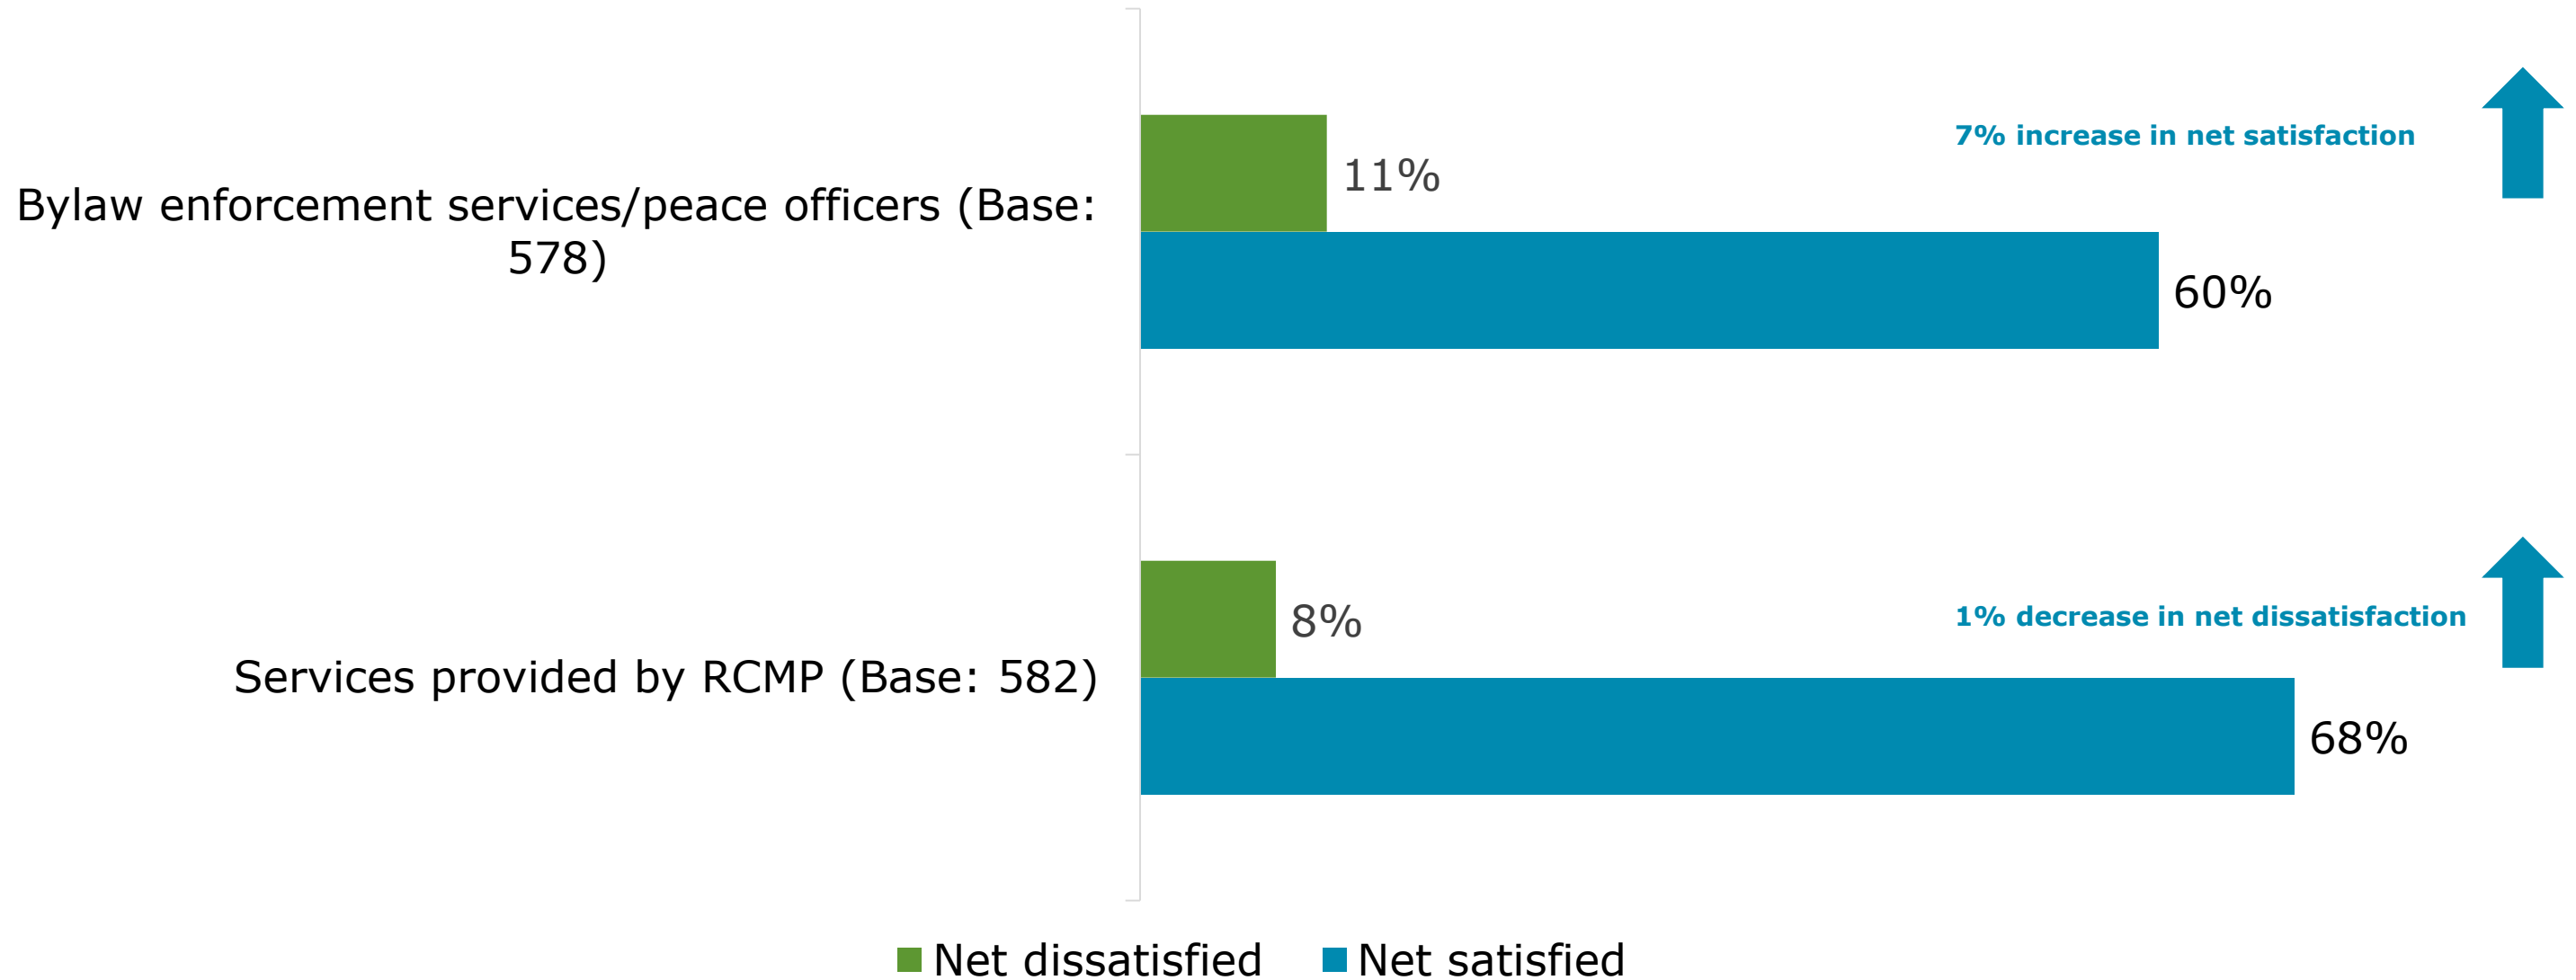

Over the past three years, satisfaction with overall County infrastructure has averaged 82%

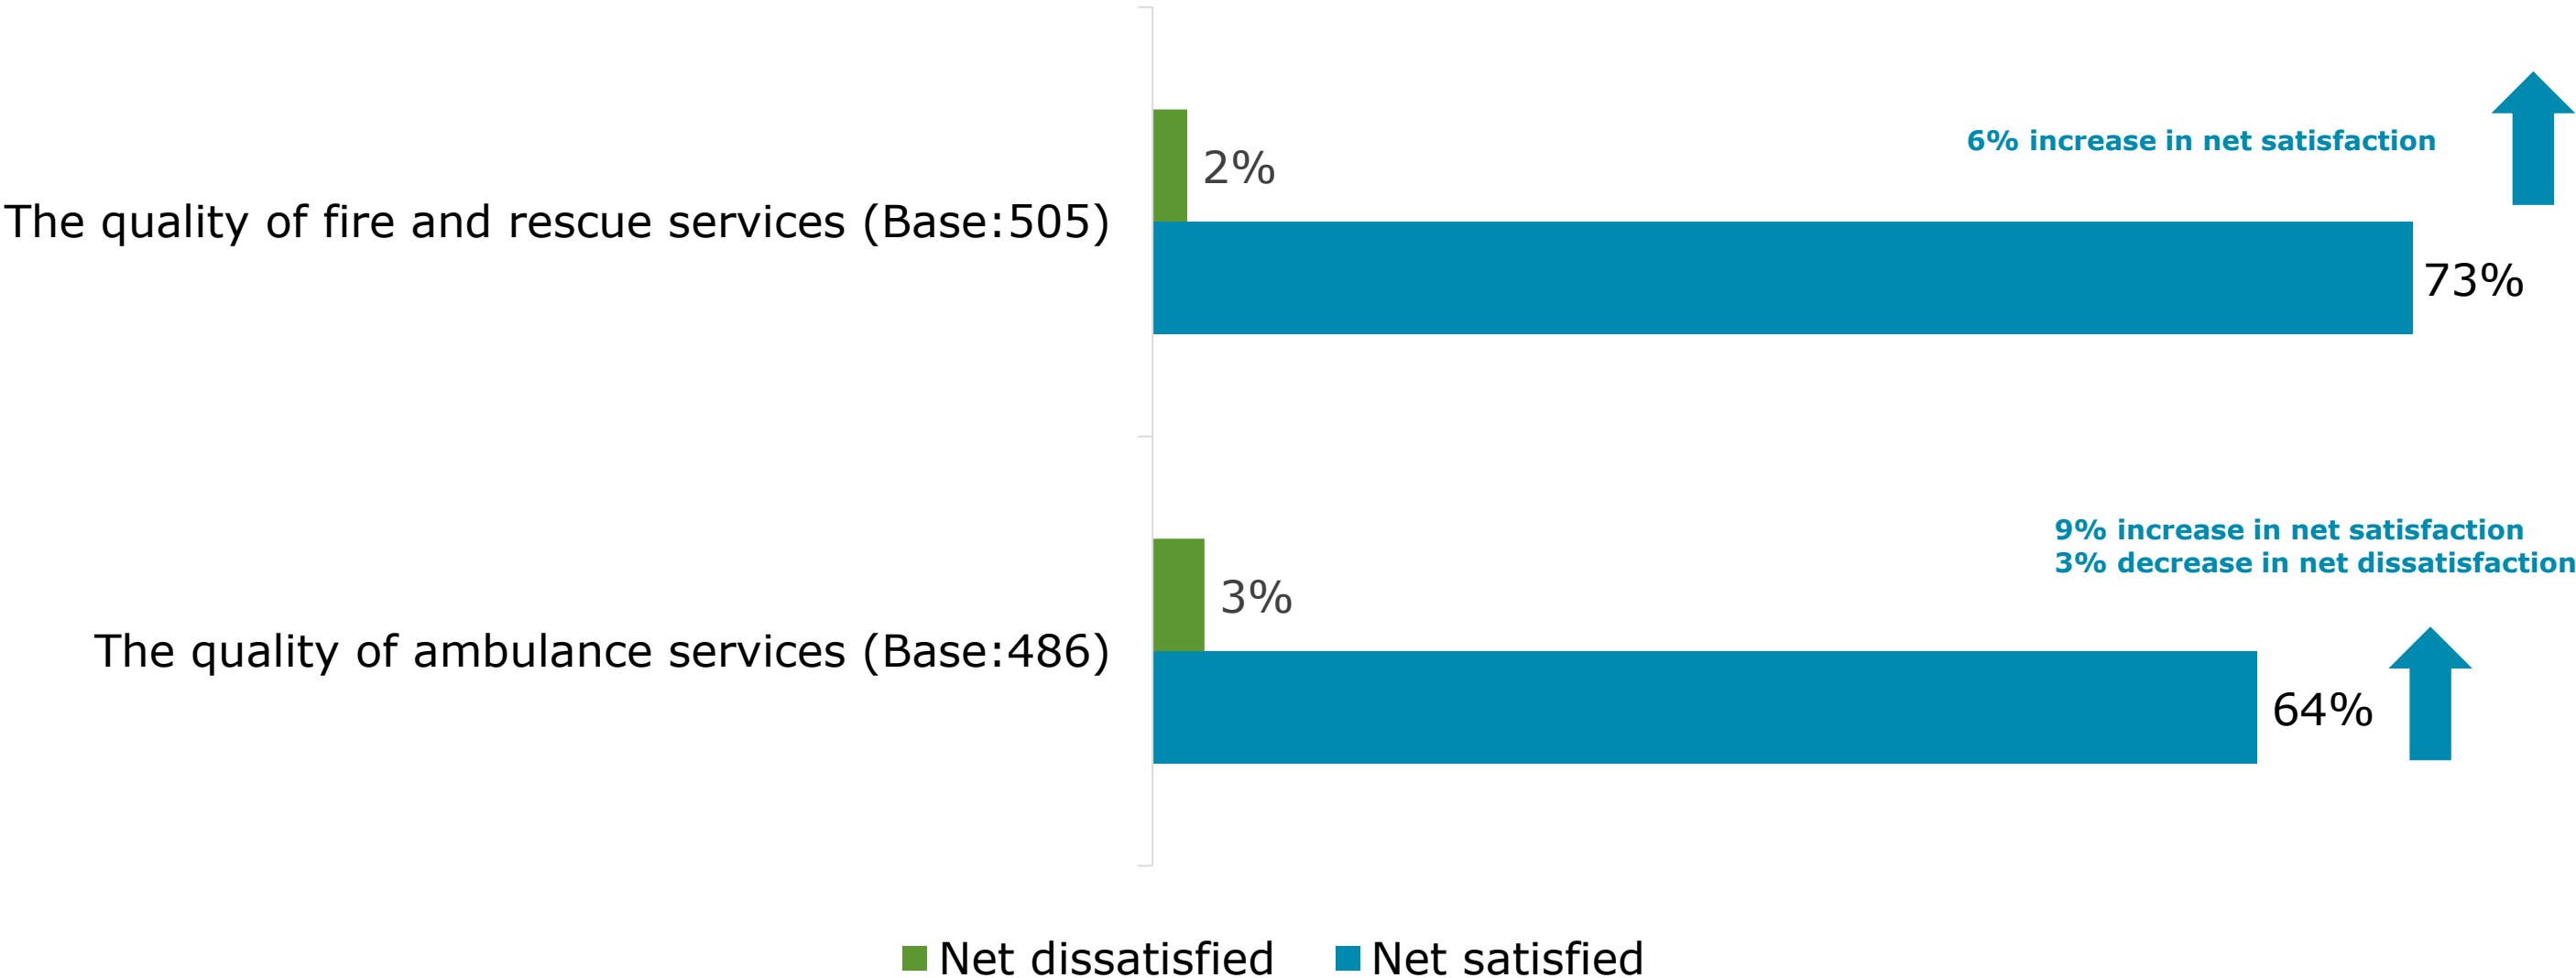

Utilities

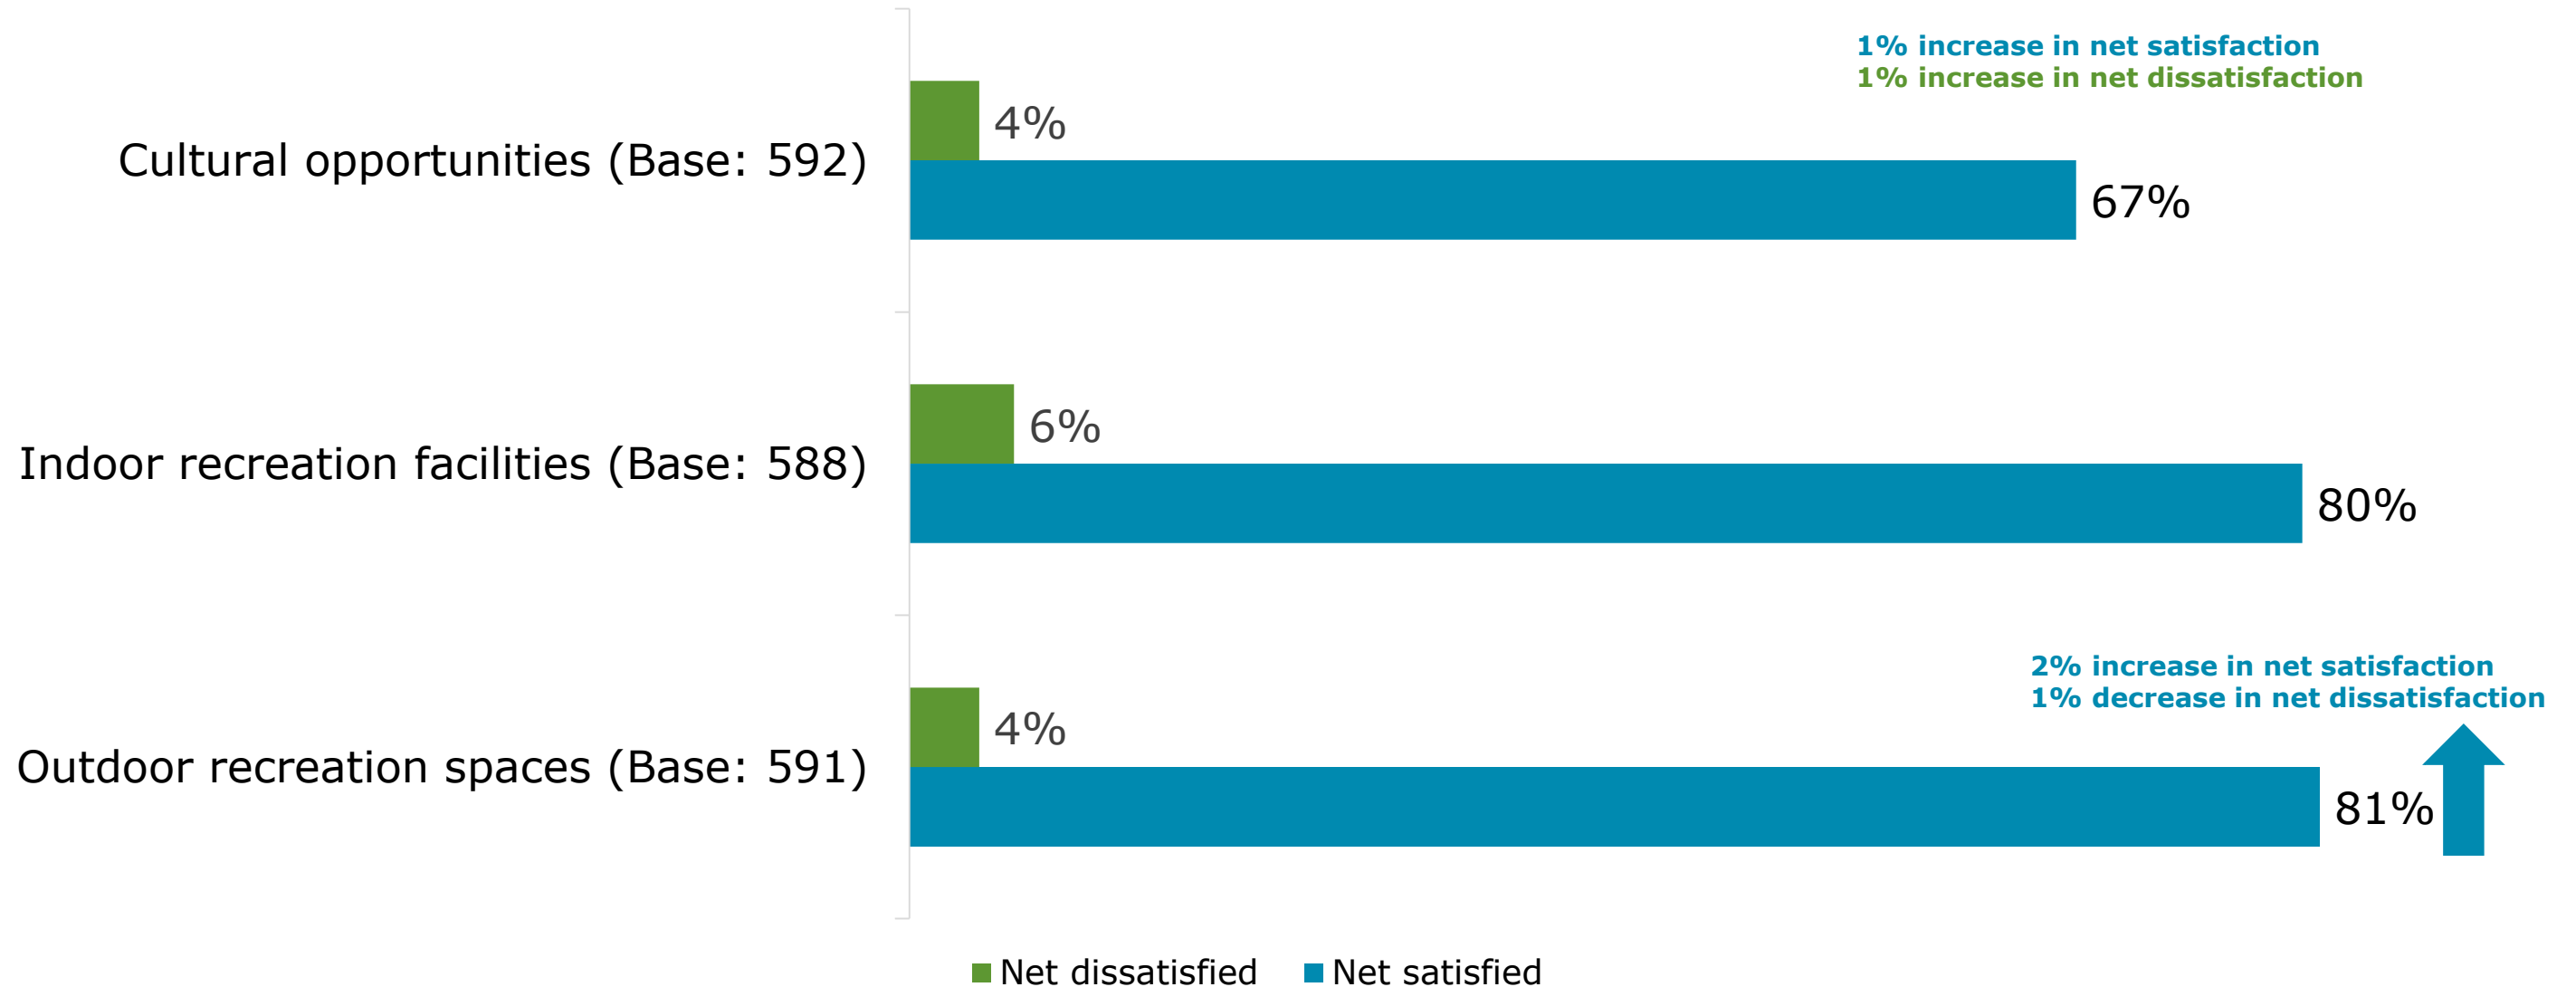

Enforcement Services

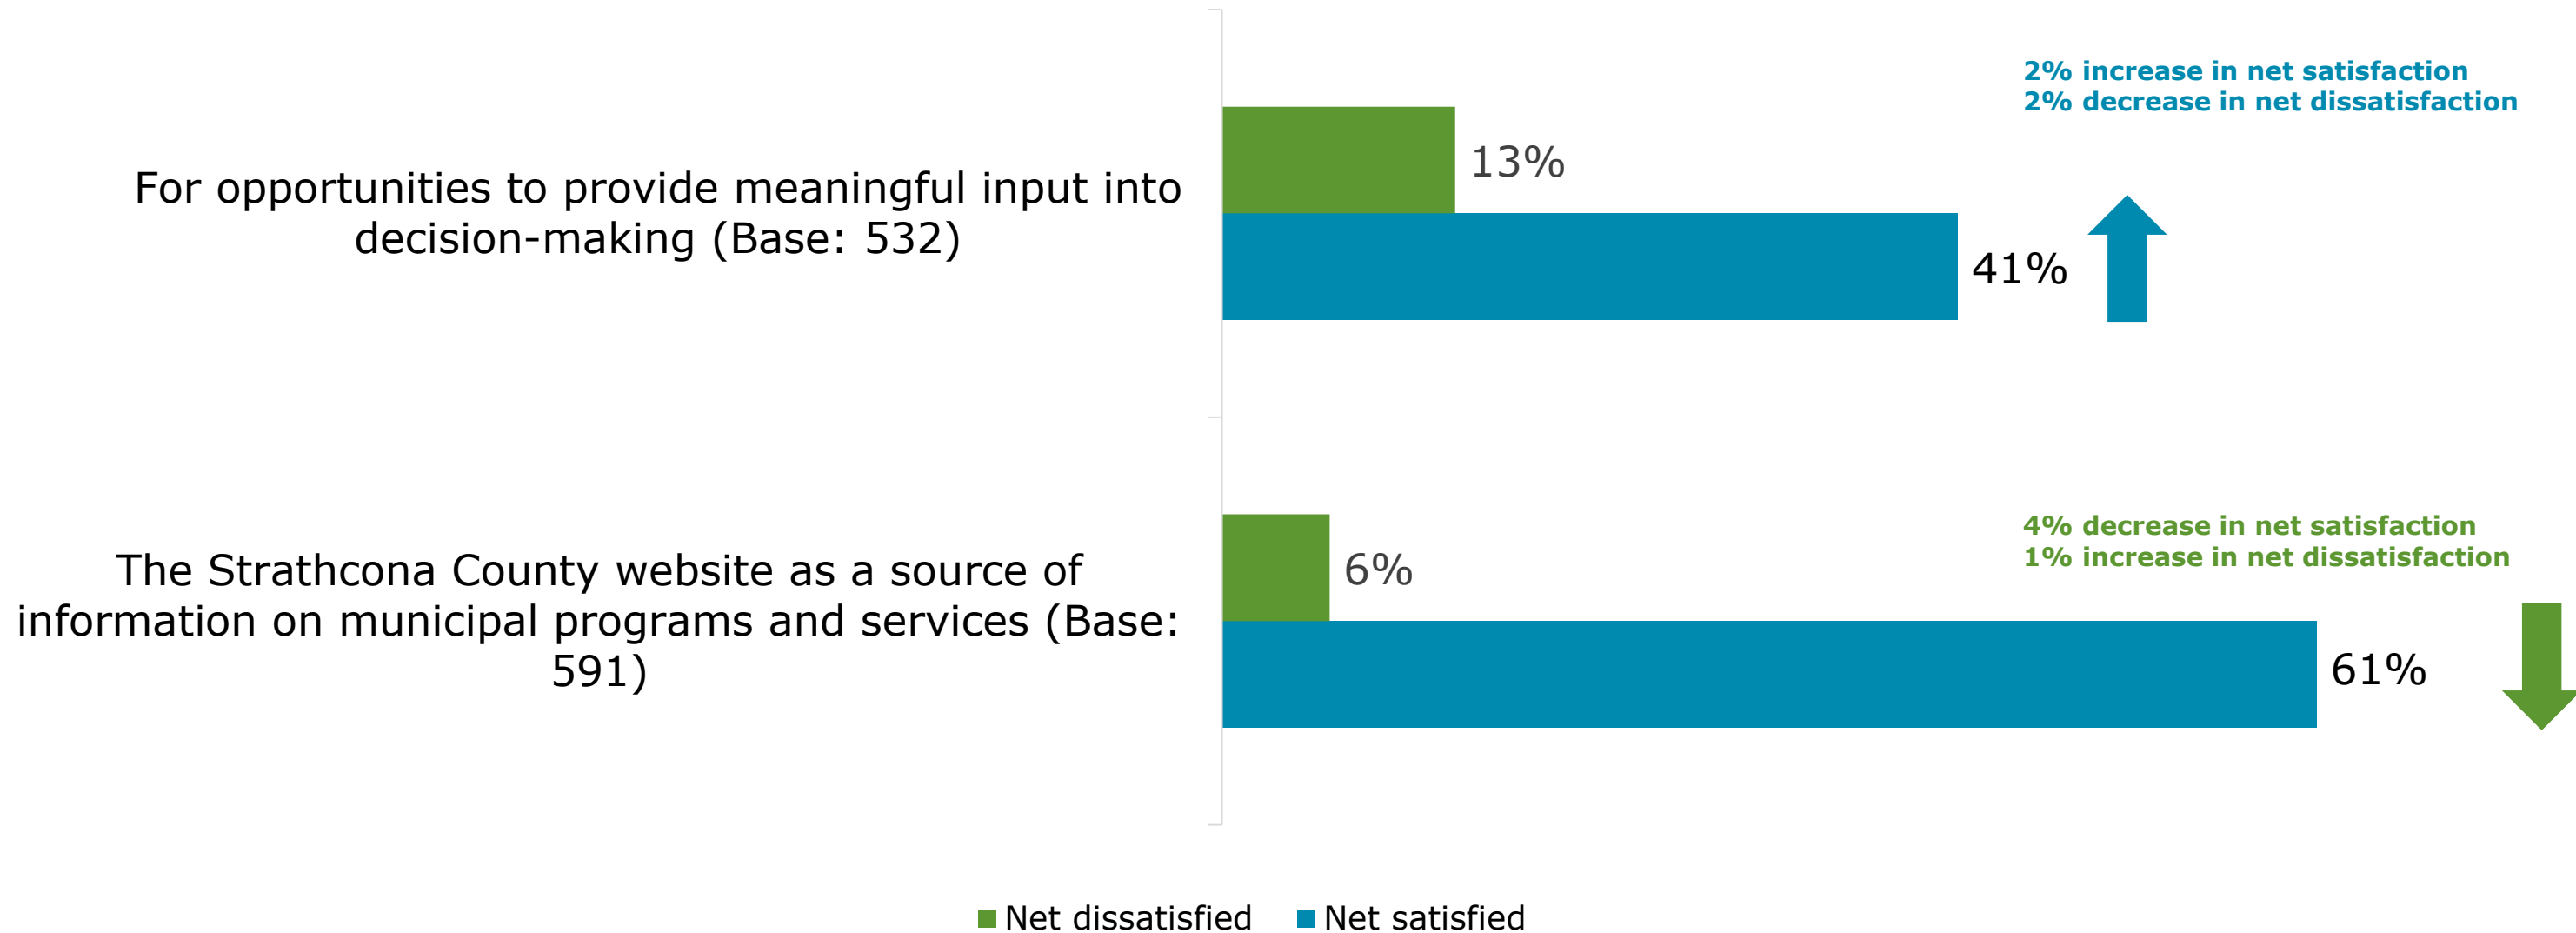

Emergency Services

Recreation, Parks and Culture

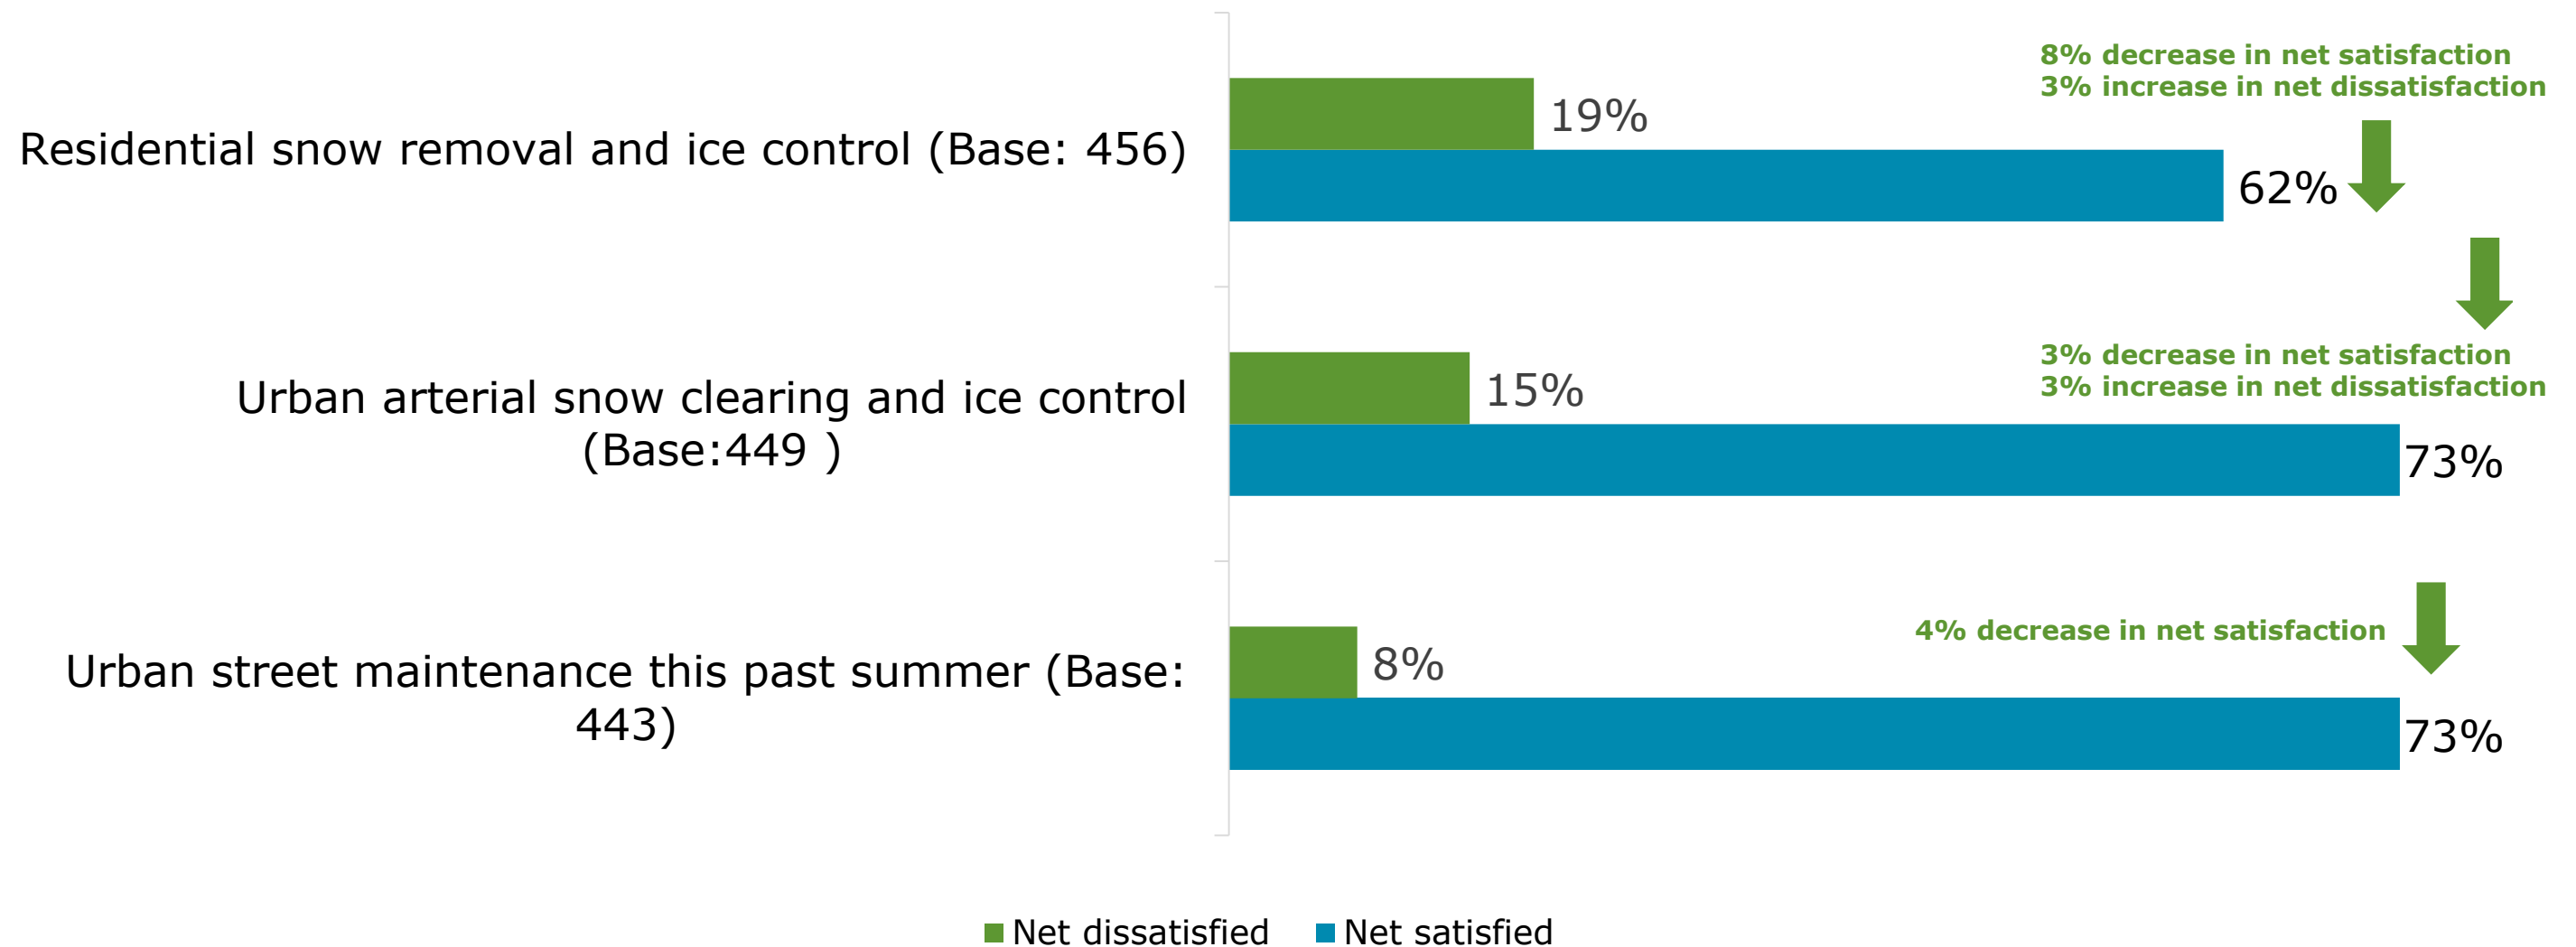

Communications

Trust in County information accuracy

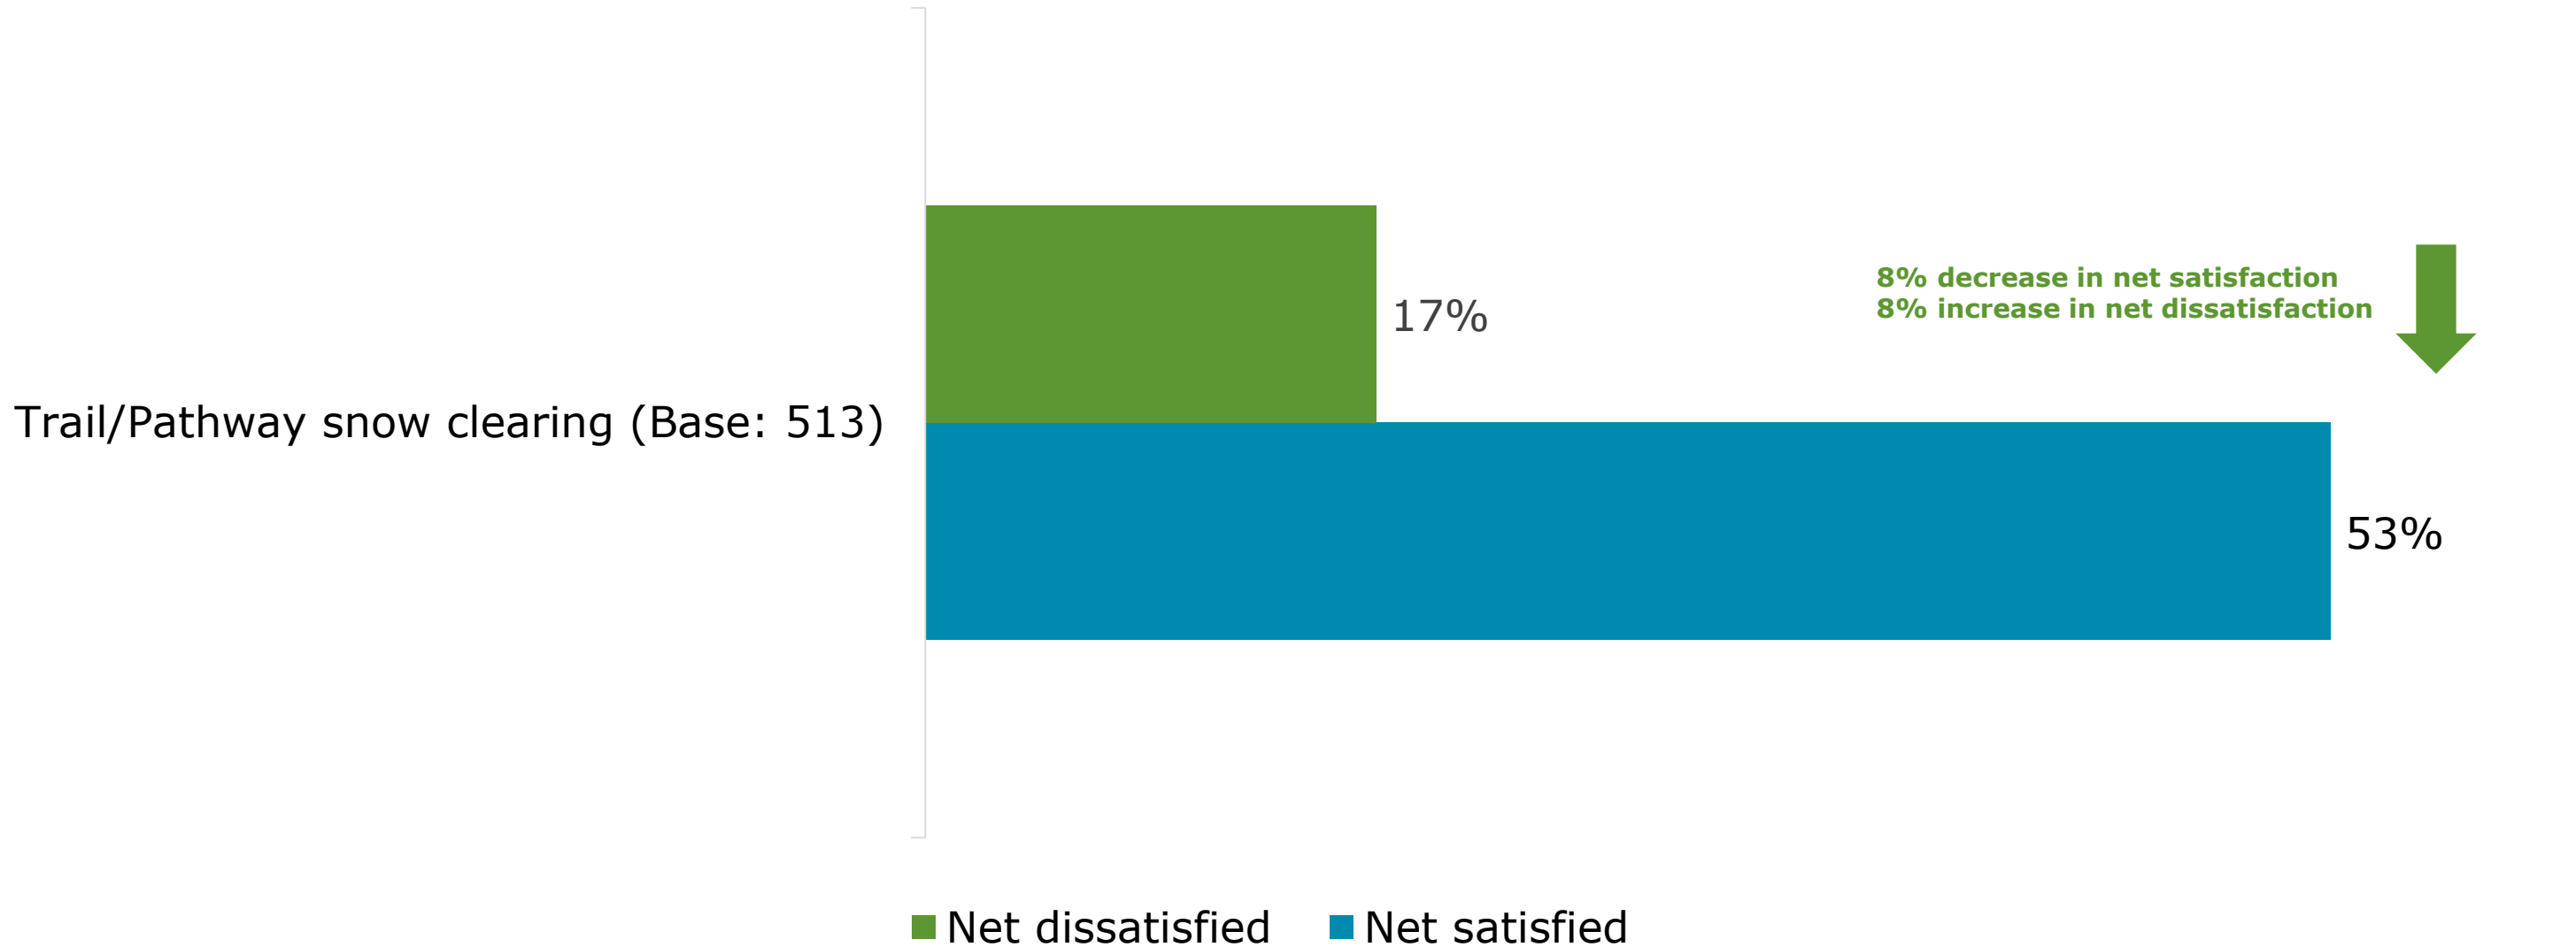

Urban snow clearing/road maintenance

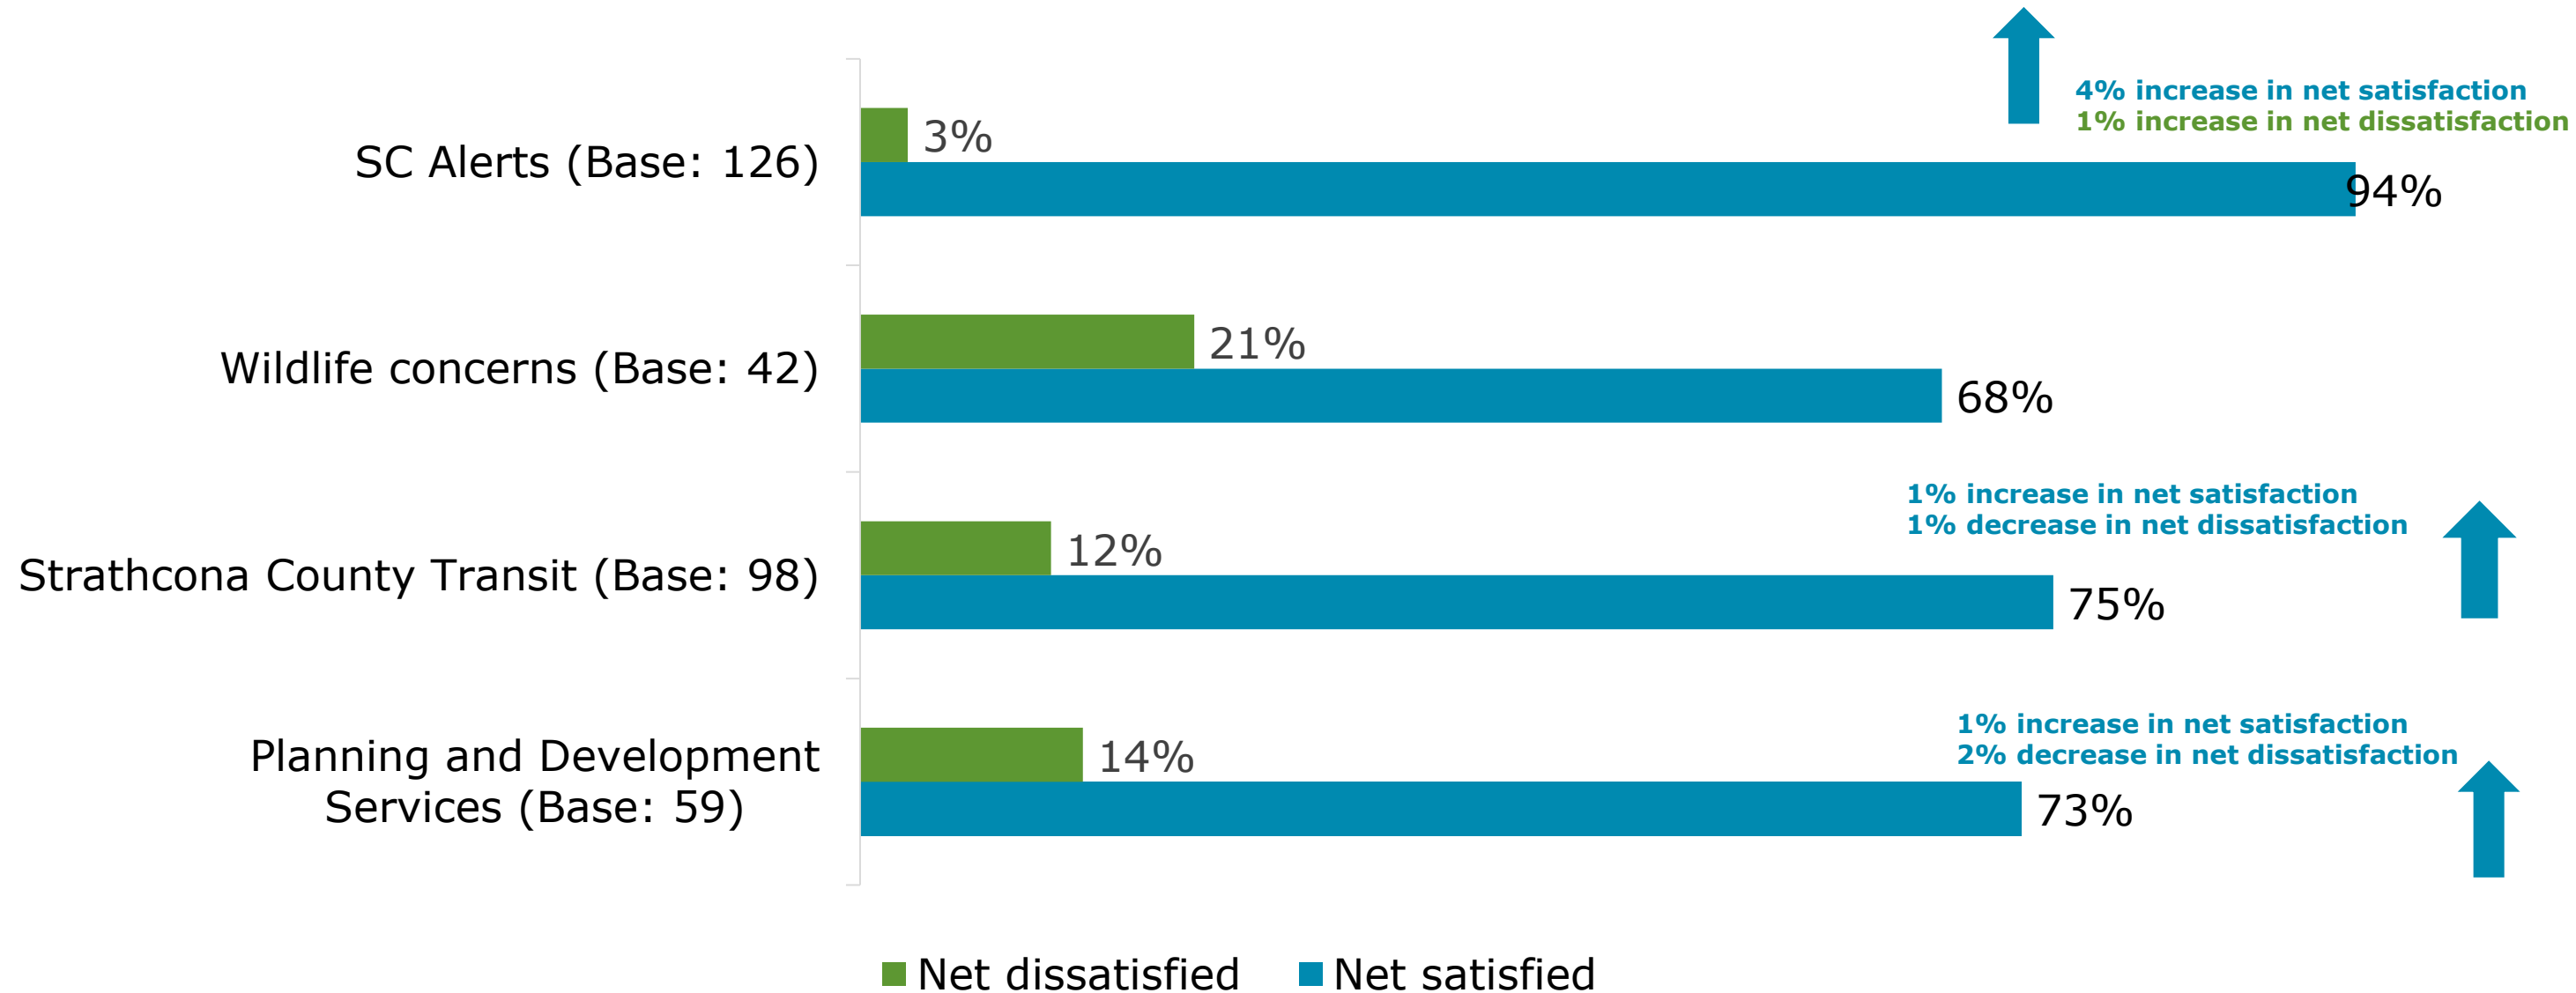

Rural snow clearing/road maintenance

Trail/pathway snow clearing

Alerts/wildlife/transit/planning

Conclusions

Key takeaways

- Minor declines in most quality of life indicators; services generally static or minor decline year over year
- Rural respondents continue to express less satisfaction with County services, but are comparable many quality of life indicators
- Older respondents (55+) report higher levels of service satisfaction and quality of life than younger cohorts
- Female respondents report higher levels of satisfaction than male respondents
- Web sample (self-selected, non-random) expresses similar patterns to vendor sample – but is generally more satisfied with County quality of life indicators and services

Key takeaways

Factors that contribute to dissatisfaction

Urban/
rural division

Growth

Services
not meeting
expectations

Cost of
services,
taxes

Factors that contribute to satisfaction

Community
safety

Urban
amenities

Responsive
services

Service quality
relative to neighbouring
municipalities
